30-INCH INTEGRATED COLUMN REFRIGERATOR

CUTOUT DIMENSIONS – FLUSH INSTALLATION
SINGLE COLUMN

Notes
Refrigerator can be installed flush with 3/4” custom panel or optional stainless steel panel kit.

With a 25” (635 mm) cutout depth, the front face of the refrigerator fits flush with 25” (635 mm) depth adjacent cabinets.

Electrical
A 115V, 60Hz., 15 amp power supply is required. An individual properly grounded branch circuit or circuit breaker is recommended. Install a properly grounded 3-prong electrical receptacle recessed into the back wall. Electrical must be located on rear wall as shown.

Note: GFI (ground fault interrupter) is not recommended.

Water Line
A cold water supply is required for water dispenser operation. Water pressure must be between 20 and 120 p.s.i.

Tubing should be long enough to extend to the front of the refrigerator. Allow enough tubing to accommodate a bend leading into the water line connection.

Water line can enter an opening through floor or back wall.

INSTALLATION CLEARANCES – FLUSH INSTALLATION
TOP VIEW

Notes
Door handle clearance with door open 115° is 16” (406 mm).

Door Swing Clearances – The installation must allow for clearances to adjacent walls or cabinets. This refrigerator is equipped with a 2-position door stop. The factory-set 115° door swing can be adjusted to 90° if clearance to adjacent cabinets or walls is restricted.

Door Handle Clearances – The Door Handle depth must be added to the dimension noted to determine the total clearances required from adjacent cabinets or walls. This clearance will vary depending on the custom handle used. When using the Stainless Steel Door Panel Kit w/Handle or the Brushed Aluminum Handle (optional accessories), the door handle clearance with door open 115° is 16” (406 mm).
